DETAILED ACTION

1. The response of 1/3/2008 was received and considered.
2. Claims 1-19 are pending.

Allowable Subject Matter

3. Claims 1-19 are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a. Regarding claim 1, Hind discloses a device authentication system, comprising a device (client, col. 17, lines 31-34) having device information including coding information for authentication (device certificate, col. 10, lines 26-29, col. 17, line 41 & Fig. 3) and information (contents of issuer field, Fig. 3, #305 & col. 18, lines 12-16) on a service provider providing authentication services (certificate authority system including registry, col. 18, lines 12-16) and a gateway (server, col. 17, lines 54-55) including decoding information corresponding to the coding information of the device (public key of the certificate authority decrypts to the device certificate, col. 18, lines 10-16), and authenticating the device by using the decoding information (CA public key is used to verify the device certificate, col. 18, lines 10-20). Kimura teaches a system where a client (MT) attempts to connect to a gateway (access point 18, ¶138), an authentication procedure is performed (¶¶139-40), a display is selected for displaying an authentication result (if authentication is performed successfully, ¶40, the authentication request display means 16 is notified, ¶42) and an authentication request screen is generated requesting a user to approve or to reject the

authentication result (display means 16 notifies the network-administering user of the authentication-requesting MT, ¶42).

b. Regarding claim 10, Hind discloses inputting device information including coding information for authentication (device certificate, col. 10, lines 26-29, col. 17, line 41 & Fig. 3) and information (contents of issuer field, Fig. 3, #305 & col. 18, lines 12-16) on a service provider providing authentication services (certificate authority system including registry, col. 18, lines 12-16) and authenticating the device (CA public key is used to verify the device certificate, col. 18, lines 10-20) by using previously stored decoding information (public key obtained) corresponding to the coding information of the device (public key of the certificate authority decrypts to the device certificate, col. 18, lines 10-16).

Kimura teaches a system where a client (MT) attempts to connect to a gateway (access point 18, ¶38), an authentication procedure is performed (¶¶39-40), a display is selected for displaying an authentication result (if authentication is performed successfully, ¶40, the authentication request display means 16 is notified, ¶42) and an authentication request screen is generated requesting a user to approve or to reject the authentication result (display means 16 notifies the network-administering user of the authentication-requesting MT, ¶42).

c. *However, the prior art of record fails to teach or disclose, either alone or in combination, selecting a display for the authentication result based on device information of a device connected to a network, in combination with the other elements of the claims.*

- d. Claims 2-9 & 11-19 are indicated as allowable based on their dependence upon claims 1 or 10.
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
